Study and Evidence-Audit Workflow
Data and frozen temporal roles
Reserved BDG2 buildings and CKW postal areas; entity-local fitting
Model fitting and calibration
Jan-Jun point model | Jul auxiliary models | Aug calibration | Sep history
Frozen Oct-Dec evaluation
Issue point forecast -> apply frozen routing rule -> deliver point or fallback forecast
Primary evidence audit
Average replacement loss | peak-restricted loss | service denominators
Post-outcome secondary diagnostics (not confirmatory)
Matched replacement rates | gain-estimator reliability | fixed-mask fallback sensitivity | CCGA component checks
Extended metrics and compute | month stability | peak-alert proxy | peak/block robustness
Verification and reproducibility
Artifact hashes, independent arithmetic checks, code/configuration bundle, and explicit infeasibility records
